is the work done by the system

$$\therefore Pa = \frac{\text{Kg}}{\text{ms}^2} \quad \& \quad J = \frac{\text{Kg m}^2}{\text{s}^2}$$

1a) False. Isobaric process is a thermodynamic process in which the pressure stays constant $\Delta P = 0$. The heat transferred to the system does work, but also changes the internal energy of the system; hence the enthalpy changes.

1b) False. Since the volume is constant, the system does no work, however the internal energy can change and that affect the enthalpy

1c) False. The change in internal energy is given by: $\Delta U = nC_V \Delta T$

1d) False. The energy is transferred only by work; and it's given by $W = \Delta H$

1e) ~~False~~ For adiabatic processes: ~~False~~ True
